

· It would make an already tense cabin environment even more stressful. Have you ever been in a coffee shop, or park, or restaurant when there was someone nearby (heaven forbid next to you) that was talking too loud, too long or anything of that irritating nature? Now picture being trapped next to that self important individual at 40,000 ft above sea level when all you wanted was some time to yourself. Now picture them continuously talking and turbulence hits, or your flight encounters a delay, and you want nothing more than to hear the announcements surrounding these circumstances, but since you are stuck next to one of these cell phone junkies, you can't hear the information that actually does pertain to your life and well being.

PLEASE, do not allow the phones to be used in flight! I see NO good that can come of it. Passengers are already stressed out enough as it is, please don't pour gas on those flames, and leave us lowly flight crew members to clean up the psychological mess. (Isn't it nice to NOT be reached, even if it is only for a few hours)?

-There is no hard evidence that cell phone use doesn't interfere with navigational instruments.

· Cell phone use would enable terrorists to coordinate a plan of action more effectively.

· The NPRM would leave it up to flight attendants to police the use of cell phones onboard the aircraft compromising our ability to maintain a safe, secure cabin environment and to conduct emergency evacuations.
